HTTP: entendendo a web por baixo dos panos

Pedro Monteiro

Full Stack Engineer | TypeScript | React | Node | Next.js | Nest.js | AWS & AI | Delivering High-Impact AI Product Solutions
Goiânia, Goiás, Brazil

Summary

I'm a Software Engineer with 4+ years of experience building web applications, SaaS platforms, and digital products, with a strong focus on frontend engineering, application architecture, and user experience.My core stack is React, Next.js, and TypeScript, and I also work with Node.js, NestJS, PostgreSQL, REST APIs, and cloud technologies. Currently at KPIT, I'm working on Web Agentic Applications, expanding my experience at the intersection of modern web development and AI-powered applications.Throughout my experience, I've reduced API requests by 50% through frontend optimizations, built a multi-tenant SaaS platform to automate business workflows, and launched an e-commerce platform that generated 20+ orders on its first day. These experiences have strengthened my ability to translate business requirements into performant, scalable, and user-focused software.I'm particularly interested in the intersection of frontend engineering and AI: building intuitive interfaces for AI-powered products, integrating LLMs and AI agents into web applications, and creating seamless user experiences around intelligent systems. I'm looking for opportunities where I can contribute directly to frontend development and AI integrations, helping turn AI capabilities into practical, reliable, and user-friendly products.Always open to connecting with engineers, teams, and companies building the next generation of AI-powered applications. Feel free to reach out here on LinkedIn.

Experience

KPIT

8 months

Mid-Level Software Engineer
April 2026 - Present (8 months)
São Paulo, Brazil

Responsibilities

• Developed high-performance web applications using React, TypeScript, and Vite as part of an international engineering team across the US, India, and the UK.

• Developed AI-powered frontend experiences integrating AI APIs, Python services, LangGraph workflows, and agent-based systems, handling asynchronous operations, concurrency, data generation, and performance.

• Led the refactoring of a complex 1,600 line implementation, restructuring it into 3 custom hooks, 1 main component of ~300 lines, and 2 reusable components using compound component composition.

• Created an enterprise•grade frontend project boilerplate with pnpm, React, Vite, TanStack Query, Zustand, Storybook, Vitest, and Playwright, establishing a scalable foundation for new applications and consistent development practices.

• Applied useMemo, memo, and useCallback strategically to minimize unnecessary calculations and re•renders.
Collaborated with backend developers on REST API integration, debugging, code reviews, and technical decisions.

Results & Impact

• Reduced a highly complex 1,600•line implementation into a modular architecture with clear separation of responsibilities and reusable components.

• Improved UI rendering performance from 56 ms to 16 ms, achieving approximately a 71% reduction in UI rendering time.

• Reduced the application’s bundle size through frontend optimization and improved component architecture.

• Established a reusable enterprise frontend boilerplate, accelerating project setup and providing standardized foundations for data fetching, state management, component documentation, unit testing, and end•to•end testing.

• Increased code maintainability, reusability, scalability, and testability through modern React architecture and engineering practices.

• Strengthened expertise in frontend architecture, React performance optimization, design patterns, automated testing, and technical standardization.

System Analyst
April 2026 - Present (8 months)

• Integrate with RAG, Python APIS, LangChain and create interface to handle with multiple logics, Attention to Detail how to create simple workflow for user.

• I refactored a critical application page, reducing its complexity from 1,600 to fewer than 300 lines of code by creating 3 custom hooks and 4 reusable components, thereby enhancing maintainability and scalability.

• I optimized interface performance, reducing load times from 54 ms to 19 ms and from 43 ms to 16 ms, improving the fluidity of the user experience in critical workflows.

• Collaborated daily with teams from India, UK, USA, Canada, and Mexico.

Sinka Soluções Logisticas
Full Stack Engineer
July 2025 - March 2026 (9 months)

• Reduced frontend performance bottlenecks by implementing React Query caching and infinite scrolling, cutting API requests by 50% and improving load performance on data-intensive pages

• Secured a system integration contract worth R$50k. By leading technical negotiations with 5 enterprise clients with good communication

• Engineered a hierarchical approval workflow system using TypeScript, React Hook Form and React Query, enabling configurable multi-level authorization processes for business operations

Sinka Logistics Solutions
Mid-Level Full Stack Developer
June 2025 - February 2026 (9 months)
Goiânia, Brazil

Responsibilities:

• Evolution and maintenance of the Transportation Management System (TMS), with a focus on scalability and performance.
• Full stack development using React, Next.js, NestJS, and TypeScript.
• Application of Clean Code principles, Clean Architecture, and design patterns.
• Requirements gathering with users and stakeholders.
• Technical and functional documentation of business rules.

Results & Impact:

• Reduced API requests by 50% after refactoring with React Query, intelligent caching, and optimization of critical components.
• Implemented a strategic integration with SAP B1, ensuring operational reliability and improved backend performance.
• Played a decisive role in technical negotiations with the client, resulting in the signing of an integration contract.
• Continuous architectural improvements and refactoring of critical system features.
• Development of new features, workflows, and usability and performance enhancements in full stack applications built with Next.js and NestJS integrated with AWS.

Self-employed

6 years 10 months

Full Stack Developer Freelance

January 2022 - January 2026 (4 years 1 month)

Goiânia, Goiás, Brasil

Responsibilities

• Designed and delivered custom software solutions end-to-end, from requirements gathering to production deployment.
• Architected and implemented scalable web applications using React, Next.js, Node.js, Firebase, and modern frontend best practices.
• Integrated payment gateways (Stripe) and logistics systems to enable full digital commerce operations.
• Designed database schemas and defined system architecture with a focus on scalability and maintainability.
• Developed landing pages optimized for conversion and performance.
• Built internal management systems for order processing, workflow control, and inventory tracking.

Notable Projects

• Multi-tenant SaaS platform for the glass industry, automating pricing calculations, quoting, inventory management, and operational workflows.
• E-commerce platform built with Next.js and Stripe, generating 20+ orders on the first day of launch.
• Digital product catalog with online ordering, increasing sales and significantly reducing manual demand via WhatsApp.

Full Stack Engineer
April 2019 - May 2023 (4 years 2 months)

• Delivered web application development projects for clients across frontend and backend scopes using JavaScript, TypeScript, React, and Node.js.

• Built and customized interfaces, APIs, and database-backed features based on client requirements and evolving business needs.

• Managed project communication, requirements clarification, delivery timelines, and iterative improvements throughout engagements.

Memora Processos Inovadores S/A
Full Stack Developer
August 2024 - July 2025 (1 year)
Goiânia, Goiás, Brazil

Responsibilities

• Developed web and mobile applications using Angular, Spring Boot, TypeScript, and React Native.
• Designed and implemented robust, scalable REST APIs with Spring Boot.
• Built responsive, high-performance user interfaces focused on usability and maintainability.
• Architected and implemented a complete notification system (SMS and offline push notifications).
• Automated standardized technical documentation generation processes.

Results & Impact

• Delivered end-to-end solutions for multiple enterprise and internal clients using Spring Boot and Angular.
• Implemented a reliable notification system leveraging Expo, React Native, and Push Notifications, significantly improving user communication and engagement.

• Optimized internal processes by automating technical document generation (.rtf to DOCX/PDF), reducing manual workload and operational time.
• Strengthened full stack expertise within complex corporate environments, contributing to scalable and sustainable system architecture.

Memora Innovative Processes
Full Stack Engineer
July 2024 - July 2025 (1 year 1 month)

• Launched a mobile push notification system using React Native, Expo, and Push Notifications, reducing reliance on email alerts by 60% and increasing daily active users by 40%

• Systematized the generation of standardized technical documentation by converting .RTF templates into DOCX/PDF, reducing manual production time by 30% and improving developer onboarding efficiency

• Created reusable table components using the Compound Composition pattern with Angular, reducing code duplication by 50% and accelerating delivery of new frontend features

CNPq - Conselho Nacional de Desenvolvimento Científico e Tecnológico
Backend Engineer
October 2023 - September 2024 (1 year)
Goiânia, Goiás, Brasil

Responsibilities
• Served as Technical Lead for the Lion X Pro project, integrating BIM (Building Information Modeling) and BEM (Building Energy Modeling) technologies for architectural solutions.
• Led requirements gathering and backend architecture design to support research and real-world use cases.
• Designed and modeled scalable MongoDB database structures ensuring data integrity and performance.
• Developed high-performance APIs with NestJS for 3D file processing and energy analysis workflows.
• Integrated AI solutions to enable real-time building energy performance insights.
• Collaborated within a multidisciplinary Scrum team, aligning technical and business objectives.

Results & Impact

• Structured and consolidated the backend architecture of a complex BIM +BEM platform.
• Implemented efficient 3D file processing pipelines with strong focus on performance and data consistency.
• Enabled automated, AI-driven energy optimization insights for architectural projects.
• Strengthened expertise in system architecture, backend scalability, complex data modeling, and technical leadership in an innovation-driven environment.

Secretaria da Economia do Estado de Goiás

Software Engineer

August 2023 - July 2024 (1 year)

Goiânia, Goiás, Brazil

Responsibilities

• Collected, organized, and analyzed strategic data to support institutional decision-making.
• Developed interactive dashboards using Power BI and Python for KPI monitoring and performance tracking.
• Automated internal workflows through custom Python scripts and desktop applications.
• Designed and delivered a web platform enabling collaborators to generate initiative supplementation processes formatted according to official regulations.
• Conducted data analysis in Python for official presentations, including a Women's Day report with state-level insights (Goiás).
• Organized and managed large-scale institutional presentations, handling stakeholder coordination, technical support, recordings, and communications.

Results & Impact

• Improved internal process efficiency and strengthened data-driven decision-making across departments.
• Delivered strategic data visualizations for executive and multi-agency use.
• Built a desktop Python application to automate spreadsheet concatenation, reducing manual workload.
• Led end-to-end execution of cross-department presentations, ensuring structured communication and high operational reliability.
• Strengthened analytical and technical expertise applied to real-world public sector challenges.

Goiás State Department of Economy

Software Engineer

June 2023 - July 2024 (1 year 2 months)

• Developed a Python-based data processing tool to perform spreadsheet set operations (left join, right join, and dataset merging), automating manual reconciliation tasks between government datasets

• Improved operational efficiency by 70% by automating data entry with Python web scraping pipeline

• Expanded an internal web portal using React and JavaScript that allowed staff to input structured data and automatically generate standardized PDF reports, ensuring consistency with management formatting requirements

• Create an interactive dashboard using Microsoft Power BI

Education

UNIPDS

Postgraduate Degree in AI Engineering, Artificial Intelligence · (January 2026 - January 2027)

Pontifícia Universidade Católica de Goiás

Bacharelado, Computer Science · (February 2020 - December 2025)

Escola do Futuro do Estado de Goiás Luiz Rassi

Technical Course, Technical Course in Web and Mobile Development · (August 2022 - June 2024)

University of Michigan

Michigan English Test (MET), English · (February 2017 - April 2019)

EFG

Technical Course in Web and Mobile Development · (August 2022 - June 2024)
